WHITE PAPER

Write a good prompt in 5 minutes

The practical guide to getting useful answers from ChatGPT, Claude or Gemini

By Binta Kande · bintakande.com

BEFORE YOU START

Why your answers are generic

You type a request into ChatGPT, Claude or Gemini and the answer is fine, but bland. The problem almost always comes from the request, not the tool: AI does not read your mind, it completes what you give it. A vague prompt gets a vague answer.

The 3 most common causes

1

No context

The AI does not know who you are, who you are talking to, or what you sell. So it answers for “everyone”.

2

A vague instruction

“Talk about my service” does not say what to do. “Write 3 hooks of 12 words” does.

3

No format requested

Without a format you get a wall of text. With a table, a list or 3 versions, you get something usable.

The good news

Five lines are enough to fix all three problems. That is the method in this guide, and it takes 5 minutes to practise.

In this guide

- The 5-line method: role, context, task, format, constraints
- Your 5-minute routine, minute by minute
- 10 tips that change everything
- 3 before / after examples: SEO, social media, sales
- The 7 most common mistakes and the pre-send checklist
- A blank template to fill in

THE METHOD

The 5 lines that improve any prompt

1. **Role**
   “You are a senior SEO writer.” The role sets the level of expertise, the vocabulary and the angle.

2. **Context**
   Your business, your audience, your goal, your numbers. This is the line that makes the answer personal.

3. **Task**
   What you want, with a precise verb: analyze, write, compare, rank, summarize.

4. **Format**
   Table, numbered list, 3 versions, 150 words. Say exactly what the answer should look like.

5. **Constraints**
   Tone, length, what to avoid. Constraints separate an average text from a usable one.

Example: before and after

BEFORE

Write me a LinkedIn post about my service.

AFTER

```
You are a LinkedIn ghostwriter.
Context: I am a [job] and I help
[audience] to [result].
Task: write a post from this anecdote:
[anecdote].
Format: 3 versions (story, list,
opinion).
Constraints: 120 to 180 words, first
line of 12 words maximum, a question
at the end, no empty phrases.
```

Remember

Role, Context, Task, Format, Constraints. If an answer disappoints you, look for which of the 5 lines was missing.

THE ROUTINE

Your 5-minute routine

A good prompt does not take talent: it takes a routine. Time yourself once, then it becomes a reflex.

1

Minute 1: the goal

Finish this sentence: “At the end, I want…”. One request per prompt, one goal.

2

Minute 2: the context

Gather 3 pieces of information: your audience, your offer, your tone. Add an example of what you like if you have one.

3

Minute 3: the 5 lines

Write the role, context, task, format, constraints. Replace anything vague with a number or an example.

4

Minute 4: run and read

Send it, read the answer, and note in one sentence what is missing or wrong.

5

Minute 5: fix and keep

Fix it in one sentence (“shorter”, “more concrete”, “with an example”). When it works, copy the prompt into your library.

Golden rule

One request, one goal. If your prompt contains three requests, write three prompts: the answers will be better.

Your prompt library

Create a document (Notion, Google Docs, notes) with three columns: the need, the prompt that works, the date of the last improvement. After a month you will have 10 prompts that save hours every week.

THE TIPS

10 tips that change everything

1. Give an example

Show what you expect: “Here is a post I liked: [example]. Write in this style.”

2. Ask for questions

“Before answering, ask me 3 questions if any information is missing.”

3. Impose a format

“Answer as a table: Idea | Audience | Hook.”

4. Set a length

“120 to 150 words”, “5 bullet points maximum”, “one sentence per slide”.

5. Say what not to do

“No jargon. Do not invent any figure. No introductory phrase.”

6. Make it reason step by step

“Think step by step before giving your final answer.”

7. Ask for several versions

“Give 3 versions: restrained, direct, warm.” You choose, you do not invent.

8. Ask for a critique

“Reread your answer as a skeptical reader and fix its weaknesses.”

9. Split complex tasks

First the outline, then each part, then the review: three prompts beat one huge one.

10. Paste your context once

A master prompt describes your business, audience and tone: you paste it at the start of the conversation and every answer takes it into account.

IN PRACTICE

3 before / after examples: SEO, social media, sales

SEO: an article outline

BEFORE

Give me article ideas about my trade.

AFTER

```
You are a senior SEO writer.
Context: my site sells [service] to
[audience]. Keyword: [keyword].
Task: analyze the search intent, then
propose an outline.
Format: H1 title (60 characters), 6 H2
headings, 5 FAQ questions.
Constraints: every H2 answers a real
question from the reader.
```

Social media: a calendar

BEFORE

Make me a content calendar.

AFTER

```
You are my editorial director.
Context: [business], audience
[audience], goal [goal], 3 posts a
week on [platform].
Task: 4-week calendar on 3 pillars
(educate, prove, sell).
Format: table Week | Topic | Hook |
Format | Call to action.
Constraints: 60% educate, 25% prove,
15% sell.
```

Sales: a quote follow-up

BEFORE

Write a follow-up for a client.

AFTER

```
You are my sales assistant.
Context: quote of [amount] sent to
[first name] on [date], no reply.
Their priority: [priority].
Task: 3 follow-ups (day 2, day 5, day
10).
Constraints: useful, then proof, then
polite close; 60 to 90 words; no
pressure; a single call to action.
```

PITFALLS

The 7 most common mistakes

1. **Asking everything at once**
   Three requests in one prompt give three average answers. Split them.

2. **Forgetting the context**
   Without audience or goal, the AI answers for everyone, so for no one.

3. **Stopping at the first answer**
   The first version is a draft. Fix it in one sentence instead of starting over.

4. **Not checking the numbers**
   AI can invent a figure or a source. Check, or tell it to use only yours.

5. **Copy-pasting without reading**
   Add your examples, your voice, your facts: that is what makes the text yours.

6. **Sharing confidential information**
   No passwords, named client data or sensitive documents in a public tool.

7. **Saving nothing**
   A prompt that works is worth keeping. Otherwise you rewrite it every week.

Pre-send checklist

- [ ] I gave the AI a role
- [ ] I described my context (business, audience, goal)
- [ ] My task starts with a precise verb
- [ ] I asked for a format (table, list, versions)
- [ ] I set a length and a tone
- [ ] I said what not to do

TO FINISH

Your template to fill in

Copy this template into your library and replace the [brackets]. You can reuse it for almost every request.

prompt-template.txt

```
You are [role: expert, job, level].

Context: [my business], [my audience], [my goal], [what I have already tried].

Task: [precise verb] [what I want].

Format: [table / numbered list / 3 versions / word count].

Constraints: [tone], [length], [what to avoid].

Before answering, ask me 3 questions if any information is missing.
```

Mini glossary

- Prompt: the request you write to the AI.
- Context: the information you give so the answer starts from your situation.
- Hallucination: information invented by the AI and presented as true. Hence the need to check.
- Master prompt: a long prompt, written once, describing your business, audience, tone and rules.

What now?

Want the AI to already know your business? My master prompt is written for you from your answers, ready to paste into your tool. To see what would save you the most time, book a free 30-minute call.
